EXPERIENCE

Freelancing

Thriving as a freelance developer since 2023, I craft user-centric web experiences with a unique blend of design and development. My expertise spans across frontend frameworks (React), content management systems (WordPress), and design tools (Figma). I build visually stunning and intuitive websites using HTML, CSS, JavaScript, and UI/UX principles. By integrating SEO best practices, I ensure projects not only look great but perform exceptionally in search and user engagement.

Wielding full-stack power (Node.js, React, Next.js), I craft scalable, robust applications that seamlessly blend stunning design with peak performance. My expertise in databases (MongoDB, MySQL) ensures data-driven experiences that keep users engaged. This holistic approach pushes the boundaries of web development, creating applications that are both beautiful and functionally excellent.

I thrive on diverse challenges, having built solutions for startups and established enterprises. My process starts with in-depth market analysis, ensuring every project resonates with its target audience. A dedicated problem-solver, I continuously hone my skills with the latest technologies. This ensures I deliver innovative, adaptable solutions, future-proofing projects for evolving landscapes. My focus on intuitive, high-performing platforms exceeds both business goals and user expectations.
